Maintenance Services

Today's service providers are increasingly reliant on the integrity of their systems. We will design a maintenance plan that will fit the individual customer's needs and ensure reliability for years to come.

DC Power Systems

- DC power plant testing
- Battery load testing
- System inventory and capacity evaluation
- Alarm Verification

AC Power Systems

- AC power system evaluation
- Backup power testing and evaluation

Facility Documentation Inspection

- Update floor plans
- Update cable tray layout plans
- Update/ create AC riser diagrams
- Update/ create Single Point Grounding diagrams

Infrared Thermography

- Verify the integrity of AC and DC connections.
- Find failing circuit breakers before they fail.
- Find problems that are not visible without the use of infrared technology.

IR picture of a battery with a defective internal bridge.
